## Summary

A highly motivated front-end developer with 3 years of experience in the fintech industry. Proficient in HTML, CSS, JavaScript, and various front-end frameworks like Vuejs. Passionate about creating user-friendly and visually appealing web applications that enhance the user experience. Committed to delivering high-quality results in a fast-paced and dynamic environment.

## EXPERIENCE

**Moneytap(Freo)  Bengaluru** - *Software Engineer*  (Jan 2020 - Jan 2023)

### Collections

Leading and developing the In-house Collections platform(web) from scratch, With role-based access control. Collections Platform helped the company to Save **60 - 70 lakhs a year** and protect customers' data

- Implemented Login authentication and stored the access token in the localStorage and in the vuex store, Built role-based enabling and disabling of features based on the logged-in agent.
- Implemented search functionality (search with reference id, phone no, etc) and filtered the leads based on the DPD Bucket, product type, and agency.
- Implemented calling functionality, updating the lead with task status.
- Structured Loan Details table which helps the collections team to view all the loans and send payment links based on the due amount and penalty amount.
- Implemented Document upload functionality and viewing of the document
- Collaborated with back-end developers to ensure seamless integration of user interface and back-end functionality.

### Portal Next

Worked On portal next web app for India (little on Vietnam) , used by the operations Team

- Worked on the existing UI, implemented configurations based on the Bucket, line type, process Key
- Integrated BPMN view
- Worked on updating task status, scheduling appointments, auto assignment of lead, generation of magic link for different purposes, uploading documents with document type and purpose
- Open google maps based on the lat and long for customer location
- Actively fixing the Bugs

### MoneyTap

Worked on Moneytap core web app for India and Vietnam

- Implemented web qual for both India and Vietnam
- Integrated google authentication for Vietnam
- Implemented instant KYC using verify and hyper-verge
- Implemented OD screen based on the configuration from the backend with field validations
- Actively fixing the Bugs

**Batch-Process**

I worked on the batch process UI, and bulk upload of the customers(using a spreadsheet) to update the data such as limit increase or change in ROI.

- Implemented a search screen for displaying the customers
- Worked on search functionality based on the batch type and date
- Implemented customer details screen - showing details in sections like customer identity, work address, residence address, and basic details of the customer

### Emilda, Bengaluru - *Intern Frontend web developer (April 2017-Jun 2017)*

Built a website for our client who is a photo editor using angular js. It is a website to showcase his skills and work.

## Volunteer / Open Source Projects

- Built website for **Joka** an e-commerce website. Displaying all the products with like, wishlist, and share functionalities and viewing the product details using reactjs
